WHAT IS BIOCHAR ?

The future of sustainable agriculture, Biochar is a charcoal used as a soil amendment, it is sustainable, rich in carbon and can remain in the soil for 1000's of years.

Biochar improves soil productivity. It reduces soil acidity and reduces the need for some chemical fertilisers. Retains moisture in the soil.....

Biochar \$2.00 per litre
(Absorbs water so it is sold by volume, not weight.)

Select Organic Seeds.

Our aim is to distribute old traditional open pollinated varieties of vegetable seed, preferably old Australian varieties and organically or bio-dynamically grown where possible.

We believe they are more nutritious and better tasting, hardy and easier to grow for the home gardener. Old varieties produce over an extended period. Home gardeners obtain relaxation, enjoyment and quality from a most rewarding hobby.

Our seeds are the old traditional open pollinated non-hybrid varieties and have no chemical treatment, and no genetic engineering.

Nature's Way Eco Sanctuary retails the full range of seeds to suit our local Victorian climate

\$4 per packet.

The Select Organic Range is Certified Organic.
